Their liquid-applied waterproofing technology means they can apply seamless and flexible membranes to any type of roofing surfaces, reports <http://www.waterproofingfew.com.au>.

Melbourne, Australia - July 22, 2016 /MarketiersMedia/ --

Findlay-Evans Waterproofing, a specialist waterproofing contractor based in Melbourne Australia, has introduced an innovative technology to the market that has the potential to change the way that people approach the waterproofing process. The company is now using liquid-applied waterproofing technology, which means they can apply seamless and flexible membranes to both new and existing roof surfaces. More information about Findlay-Evans' [roof waterproofing membrane products](#) and the technology they employ is available at the company's website.

Paul Evans, a spokesperson for Findlay-Evans Waterproofing, commented "Roof leaks are a serious problem that can cause irreversible damage if not handled in a timely manner. Unfortunately, many property owners put off the waterproofing process because they think it will be tedious and costly. The good news is that the liquid membrane technology that we use in our projects helps to solve both of those problems. Our spray-on membrane products provide a long-term waterproofing solution but also happen to be quick to apply and allow us to pass significant cost savings on to our clients."

Using their liquid [Roof Waterproofing Membrane](#) technology, the Findlay-Evans team can provide long-lasting waterproofing membranes for a number of roof types, surfaces, and conditions. Their spray-on membranes are high-quality, and the fact that they can be sprayed over existing services makes them a more cost-effective alternative to roof or membrane removal and replacement. Findlay-Evans' waterproofing products set instantly after application, which makes installation a breeze and allows their technicians to waterproof a roof up to 3 times faster than conventional sheet/torch-on systems.

As Evans goes on to say, "The best thing about our elastomeric membranes is that they are designed to be used anywhere and on any type of roofs, including residential, commercial, industrial, flat, concrete, and metal. This allows us to solve a variety of issues with roofs both old and new. We encourage those who are in need of a [Waterproofing Membrane Melbourne](#) to give us a call and see how our products and services can solve their problems quickly, saving them time, money, and frustration."

About Findlay-Evans Waterproofing:

Findlay-Evans Waterproofing is a specialist waterproofing contractor based in Melbourne Australia. As Registered Building Practitioners and waterproofers, they use construction knowledge and experience to prevent and manage water ingress. Whether it's a large commercial project or a residential retaining wall, they know that every waterproofing project is different and they ensure their clients receive the best solution with complete professional application.
