Melbourne, Victoria, Australia

## Summary

PH: 03 8812 2918

Email: info@waterproofingfew.com.au

BALCONY - Repairs, Remediation & Restoration.

"If It Has a Balcony, It Will Leak !"

This unfortunate statement was taken from an article titled  
"Melbourne's high-rise nightmares taking a tall toll on residents and  
investors" from The Age, Melbourne 25th September 2016.

There are several key points within this article I would like to  
emphasize:

- Residential multi-story, multi-dwelling, apartment buildings are  
experiencing an alarming frequency of building defects, most  
commonly caused through waterproofing failure.

ROOF - METAL & CONCRETE - REPAIRS & RESTORATION

Registered Building Practitioner & Certified Waterproofing Contractor  
- based in Melbourne Victoria Australia.

Using eco-friendly & environmental products - LIQUID APPLIED  
WATERPROOFING MEMBRANES.

Findlay & Evans Waterproofing are Australian Certified Applicators for Liquid Applied Membranes.

- Eco friendly: no solvents, flames, heat, OH&S compliant
- Seamless: no joins, seams or overlaps to crack/split/tear
- Extreme Flexibility : moves with thermal cycle
- Robust Adherence: metal, timber, concrete, masonry, asbestos
- Cost Effective: fast spray application

We provide waterproofing solutions to the construction, engineering, mining, agricultural, landscaping, project management maintenance, equine and marine industries to name just a few.

So whether it is a tunnel, water treatment plant, balconies and walkways, green roof, underground facility, parking deck, new roof or the refurbishing of an existing roof F.E.W Waterproofing can offer solutions for your requirements.

## Experience

Findlay-Evans Waterproofing - LIQUID & SPRAY APPLY  
MEMBRANES - Melbourne

Managing Director

May 2005 - Present

Victoria Australia - Waterproofing Company & Specialist Liquid Applied  
Membrane

Waterproofing Membranes, Crack Injection & Concrete Repair, Liquid Rubber and environmental Liquid Applied Membranes in Melbourne Victoria Australia.

Tanking, below ground waterproofing, retaining walls, foundation, lift pits, crack injection and concrete repair - F.E.W Waterproofing is a specialist contractor & applicator for waterproofing, protective coatings, concrete repair & crack injection.

Both CONSTRUCTION & WATERPROOFING knowledge is required to provide expertise for water ingress.

I have worked in the building industry for over 25 years, many of these as a registered builder myself.

As managing director of F.E.W Waterproofing, we provide structural and waterproofing experience & knowledge to provide problem-solving expertise in the waterproof industry.

As a builder I have frequently encountered sub-optimum waterproofing procedures – poorly performed due to inferior workmanship and/or utilising incorrect materials and often combined with a lack of understanding and knowledge of construction methods.

I was sure the construction industry deserved access to better trained and improved knowledgeable waterproofing expertise.

Consequently when the opportunity arose to manage one of Melbourne's well established and reputable names in the waterproofing and protective coatings industry –Findlay Waterproofing, I considered my construction experience would be a great fit with an expert waterproofing company. Bruce Findlay started in the waterproofing industry over 25 years ago and upon retirement I became the owner and director of Findlay-Evans Waterproofing, now morphed into F.E.W Waterproofing.

**Australian Institute of Waterproofing**  
**President**  
January 2017 - Present

I joined the A.I.W committee to "make a difference". I am optimistic about seeing changes for the better. I have worked in the construction industry for over 30 years, many of these as a Registered Building Practitioner. As a builder I frequently encountered sub-optimum waterproofing practices - poorly performed due to inferior workmanship and/or utilising the incorrect products. This is often compounded with a lack of understanding & knowledge about construction methods - which I consider critical to solving many water ingress problems.
